Four Reasons to Work with a European Sales Engineer

"When customers include you and allow you to be involved throughout your lifetime as a partner in working from a final forward vision."

Tim Hoppert
Founder and Director of MER Europe

MER Europe (Medical Engineering and service-oriented partner to medical device makers who needs an engineering service support.

MER Europe represents innovative and quality driven suppliers from both the United States and Europe with innovative companies that work the potential to make a difference in the marketplace by continuously expanding their product range and their core competences.

MER Europe has been on products for several years. Product types range from smart sensors to more sophisticated solutions in medical applications.

Challenging projects are tackled with their respective capabilities as by solving them to other manufacturers in their extended network, which then prove to be a more effective solution.

"Finding solutions is helping customers to develop better healthcare products is the most rewarding part of the doctor of MER Europe."

"Being confronted with all types of medical devices and their applications on a daily basis makes you naturally aware of how important reliability of good healthcare is for everyone."

MER Europe aims to understand customer goals with specific competence and clinical criteria. The support provided and the years of experience in designing and manufacturing medical products.

There are four cases that illustrate how MER Europe has successfully helped clients:

1. A multinational medical device company asked MER Europe to develop an **ambulatory implantable device** for a very specific application. MER Europe conducted a market analysis and created a preliminary product. Products ranging from the market were selected to specify the final device. With the support of MER Europe, the company was able to develop a product with excellent technical characteristics. MER Europe supported the company in the development of the product, provided technical support, and managed the production of the product. Finally, the production of the product was initiated and packaged by the manufacturer.
2. Another global player wanted to outsource the development of a **block resistor assembly** technology. MER Europe was able to provide a workable solution for most of the major components required, e.g. solder paste and assembly. Managing the process and operation between the customer and MER Europe was crucial in bringing the product to market. The block resistor assembly was successfully sold their area.
3. In another instance, MER Europe helped to reverse the original approach of the manufacturing process system. This is short design and manufacturing expertise. MER Europe supported their cutting the entire support structure of the delivery device rather than just a request.
4. A multinational medical device company asked MER Europe to develop an **ambulatory implantable device** for a very specific application. MER Europe conducted a market analysis and created a preliminary product. Products ranging from the market were selected to specify the final device. With the support of MER Europe, the company was able to develop a product with excellent technical characteristics. MER Europe supported the company in the development of the product, provided technical support, and managed the production of the product. Finally, the production of the product was initiated and packaged by the manufacturer.

These projects are a great example of how partners complement each other. If you have a challenge, MER Europe is a manufacturing partner – local partner for you.

Fischer Freedom's Major Extensions Enable Versatile Innovations in Connectivity

These new products now add to the capabilities of the Fischer Freedom™ series in connectivity solutions. They are available in a wide range of configurations, offering a high level of flexibility and reliability. The new products are designed to meet the needs of a wide range of applications, from industrial to consumer electronics. They are available in a wide range of configurations, offering a high level of flexibility and reliability.
